Updates in chronic wound management – 2nd Lecture “Alteration in Molecular Science and Cellular Biology for Diabetic Foot Ulcer Management”

- Objectives:**
1. To understand the molecular and cellular biology in normal wound healing
 2. To identify the molecular alteration in diabetic foot ulcer
 3. To recognize the principle of management in diabetic foot ulcer healing

Speaker(s): **Dr Tsang Ka Kit**

Dr Tsang is the Nurse Consultant of the Orthopaedics and Traumatology Department, Queen Elizabeth Hospital since 2012. He graduated from the Bachelor of Science in Nursing programme in 1994 with PhD in nursing focused on DM foot ulcer healing awarded in 2017. He has special interests about ulcer management including complicated traumatic soft tissue injury, diabetic ulcer, autoimmune related chronic ulcer and post-radiotherapy ulcer management. Besides, Dr Tsang is a clinician excelling in the molecular biology alteration throughout the ulcer healing process; enthusiastic in innovative practice on maggot debridement therapy, soft cast application for off-loading on plantar foot ulcer and progressive closure of wounds with negative pressure wound therapy.

Date: **5 Jun 2019**

Time: **6:30pm to 8:30pm**
